

**Article 15.7. Drip pads****§66264.570. Applicability.**

(a) The requirements of this article apply to owners and operators of facilities that use new or existing drip pads to convey treated wood drippage, precipitation, and/or surface water run-off to an associated collection system. Existing drip pads are those constructed before December 6, 1990 and those for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 6, 1990. All other drip pads are new drip pads. The requirement at section 66264.573(b)(3) to install a leak collection system applies only to those drip pads that are constructed after December 24, 1992 except for those constructed after December 24, 1992 for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 24, 1992.

(b) The owner or operator of any drip pad that is inside or under a structure that provides protection from precipitation so that neither run-off nor run-on is generated is not subject to regulation under sections 66264.573(e) or 66264.573(f), as appropriate.

(c) The requirements of this article are not applicable to the management of infrequent and incidental drippage in storage yards provided that:

(1) the owner or operator maintains and complies with a written contingency plan that describes how the owner or operator will respond immediately to the discharge of such infrequent and incidental drippage. At a minimum, the contingency plan shall describe how the owner or operator will do the following:

- (A) cleanup the drippage;
- (B) document the cleanup of the drippage;
- (C) retain documents regarding cleanup for three years; and
- (D) manage the contaminated media in a manner consistent with Department regulations.

NOTE: Authority cited: Sections 25150, 25159, 25159.5 and 25245, Health and Safety Code; and Section 58012, Governor's Reorganization Plan Number 1 of 1991. Reference: Sections 25150, 25159 and 25159.5, Health and Safety Code; and 40 CFR Section 264.570.

**HISTORY**

1. New section filed 7-29-94; operative 8-29-94 (Register 94, No. 30).
2. Change without regulatory effect adding new article heading filed 9-13-94 pursuant to section 100, title 1, California Code of Regulations (Register 94, No. 37).

**§66264.571. Assessment of Existing Drip Pad Integrity.**

(a) For each existing drip pad as defined in section 66264.570, the owner or operator shall evaluate the drip pad and determine that it meets all of the requirements of this article, except the requirements for liners and leak detection systems of section 66264.573(b). No later than the effective date of this rule, the owner or operator shall obtain and keep on file at the facility, a written assessment of the drip pad, reviewed and certified by an independent, qualified professional engineer registered in California that attests to the results of the evaluation. The assessment shall be reviewed, updated, and re-certified annually until all upgrades, repairs, or modifications necessary to achieve compliance with all of the standards of section 66264.573 are complete. The evaluation shall document the extent to which the drip pad meets each of the design and operating standards of section 66264.573, except the standards for liners and leak detection systems, specified in section 66264.573(b).

(b) The owner or operator shall develop a written plan for upgrading, repairing, and modifying the drip pad to meet the requirements of section 66264.573(b), and submit the plan to the Department no later than two years before the date that all repairs, upgrades, and modifications are complete. This written plan shall describe all changes to be made to the drip pad in sufficient detail to document compliance with all the requirements of section 66264.573. The plan shall be reviewed and certified by an independent qualified registered professional engineer.

(c) Upon completion of all upgrades, repairs, and modifications, the owner or operator shall submit to the Department, the as-built drawings for the drip pad together with a certification by an independent, qualified professional engineer registered in California attesting that the drip pad conforms to the drawings.

(d) If the drip pad is found to be leaking or unfit for use, the owner or operator shall comply with the provisions of section 66264.573(m) or close the drip pad in accordance with section 66264.575.

NOTE: Authority cited: Sections 25150 and 25159, Health and Safety Code; and Section 58012, Governor's Reorganization Plan Number 1 of 1991. Reference: Sections 25150, 25159 and 25159.5, Health and Safety Code; and 40 CFR Section 264.571.

**HISTORY**

1. New section filed 7-29-94; operative 8-29-94 (Register 94, No. 30).

**§66264.572. Design and Installation of New Drip Pads.**

Owners and operators of new drip pads shall ensure that the pads are designed, installed, and operated in accordance with one of the following:

- (a) All of the requirements of sections 66264.573 (except 66264.573(b), 66264.574 and 66264.575, or
- (b) All of the requirements of sections 66264.573 (except section 66264.573(a)(4)(A) and (B)), 66264.574 and 66264.575.

NOTE: Authority cited: Sections 25150, 25159, 25159.5 and 25245, Health and Safety Code; and Section 58012, Governor's Reorganization Plan Number 1 of 1991. Reference: Sections 25150, 25159 and 25159.5, Health and Safety Code; and 40 CFR Section 264.572.

#### HISTORY

1. New section filed 7-29-94; operative 8-29-94 (Register 94, No. 30).

#### **§66264.573. Design and Operating Requirements.**

- (a) Drip pads shall:
  - (1) be constructed of non-earthen materials, excluding wood and non-structurally supported asphalt;
  - (2) be sloped to free-drain treated wood drippage, rain and other waters, or solutions of drippage and water or other wastes to the associated collection system;
  - (3) have a curb or berm around the perimeter;
  - (4)(A) have a hydraulic conductivity of less than or equal to  $1 \times 10^{-7}$  centimeters per second, e.g., existing concrete drip pads shall be sealed, coated, or covered with a surface material with a hydraulic conductivity of less than or equal to  $1 \times 10^{-7}$  centimeters per second such that the entire surface where drippage occurs or may run across is capable of containing such drippage and mixtures of drippage and precipitation, material, or other wastes while being routed to an associated collection system. This surface material shall be maintained free of cracks and gaps that could adversely affect its hydraulic conductivity, and the materials shall be chemically compatible with the preservatives that contact the drip pad. The requirements of this provision apply only to existing drip pads and those drip pads for which the owner or operator elects to comply with section 66264.572(a) instead of Section 66264.572(b).
  - (4)(B) the owner or operator shall obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by an independent, qualified registered professional engineer registered in California that attests to the results of the evaluation. The assessment shall be reviewed, updated and recertified annually. The evaluation shall document the extent to which the drip pad meets the design and operating standards of this section, except for paragraph (b) of this section.
  - (5) be of sufficient structural strength and thickness to prevent failure due to physical contact, climatic conditions, the stress of daily operations, e.g., variable and moving loads such as vehicle traffic, movement of wood, etc.
- (b) If an owner or operator elects to comply with section 66264.572(b) instead of section 66264.572(a), the drip pad shall have:
  - (1) a synthetic liner installed below the drip pad that is designed, constructed, and installed to prevent leakage from the drip pad into the adjacent subsurface soil or groundwater or surface water at any time during the active life (including the closure period) of the drip pad. The liner shall be constructed of materials that will prevent waste from being absorbed into the liner and to prevent releases into the adjacent subsurface soil or groundwater or surface water during the active life of the facility. The liner shall be:
    - (A) constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or drip pad leakage to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from vehicular traffic on the drip pad);
    - (B) placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression or uplift; and
    - (C) installed to cover all surrounding earth that could come in contact with the waste or leakage; and
  - (2) a leakage detection system immediately above the liner that is designed, constructed, maintained, and operated to detect leakage from the drip pad. The leakage detection system shall be:
    - (A) constructed of materials that are:
      - 1. chemically resistant to the waste managed in the drip pad and the leakage that might be generated; and
      - 2. of sufficient strength and thickness to prevent collapse under the pressures exerted by overlaying materials and by any equipment used at the drip pad;
    - (B) designed and operated to function without clogging through the scheduled closure of the drip pad; and
    - (C) designed so that it will detect the failure of the drip pad or the presence of a release of hazardous waste or accumulated liquid at the earliest practicable time.
  - (3) a leakage collection system immediately above the liner that is designed, constructed, maintained and operated to collect leakage from the drip pad such that it can be removed from below the drip pad. The date, time, and quantity of any leakage collected in this system and removed shall be documented in the operating log.
- (c) Drip pads shall be maintained such that they remain free of cracks, gaps, corrosion, or other deterioration that could cause hazardous waste to be released from the drip pad.
- (d) The drip pad and associated collection system shall be designed and operated to convey, drain, and collect liquid resulting from drippage or precipitation in order to prevent run-off.
- (e) Unless protected by a structure, as described in section 66264.570(b), the owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the drip pad during peak discharge from at least a 24-hour, 25-year storm, unless the system has sufficient excess capacity to contain any run-off that might enter the system.
- (f) Unless protected by a structure or cover, as described in section 66264.570(b), the owner or operator shall design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

(g) The drip pad shall be evaluated to determine that it meets the requirements of subsections (a) through (f) of this section and the owner or operator shall obtain a statement from an independent, qualified professional engineer registered in California certifying that the drip pad design meets the requirements of this section.

(h) Drillage and accumulated precipitation shall be removed from the associated collection system as necessary to prevent overflow onto the drip pad.

(i) The drip pad surface shall be cleaned thoroughly in a manner and frequency such that accumulated residues of hazardous waste or other materials are removed, with residues being properly managed as hazardous waste, so as to allow weekly inspections of the entire drip pad surface without interference or hindrance from accumulated residues of hazardous waste or other materials on the drip pad. The owner or operator shall document the date and time of each cleaning and the cleaning procedure used in the facility's operating log. The owner or operator shall determine if the residues are hazardous as per section 66262.11 and, if so, shall manage them under chapters 11 through 18 and 20.

(j) Drip pads shall be operated and maintained in a manner to minimize tracking of hazardous waste or hazardous waste constituents off the drip pad as result of activities by personnel or equipment.

(k) After being removed from the treatment vessel, treated wood from pressure and non-pressure processes shall be held on the drip pad until drillage has ceased. The owner or operator shall maintain records sufficient to document that all treated wood is held on the pad following treatment in accordance with this requirement.

(l) Collection and holding units associated with run-on and run-off control systems shall be emptied or otherwise managed as soon as possible after storms to maintain design capacity of the system.

(m) Throughout the active life of the drip pad and as specified in the permit, if the owner or operator detects a condition that may have caused or has caused a release of hazardous waste, the condition shall be repaired within a reasonably prompt period of time following discovery, in accordance with the following procedures:

(1) upon detection of a condition that may have caused or has caused a release of hazardous waste (e.g., upon detection of leakage in the leak detection system), the owner or operator shall:

(A) enter a record of the discovery in the facility operating log;

(B) immediately remove the portion of the drip pad affected by the condition from service;

(C) determine what steps shall be taken to repair the drip pad and clean up any leakage from below the drip pad, and establish a schedule for accomplishing the repairs;

(D) within 24 hours after discovery of the condition, notify the Department of the condition and, within ten working days, provide written notice to the Department with a description of the steps that will be taken to repair the drip pad and clean up any leakage, and the schedule for accomplishing this work;

(2) the Department will review the information submitted, make a determination regarding whether the pad shall be removed from service completely or partially until repairs and clean up are complete, and notify the owner or operator of the determination and the underlying rationale in writing;

(3) upon completing all repairs and clean up, the owner or operator shall notify the Department in writing and provide a certification signed by an independent, qualified professional engineer registered in California, that the repairs and clean up have been completed according to the written plan submitted in accordance with subsection (m)(1)(D) of this section.

(n) Should a permit be necessary, the Department will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

(o) The owner or operator shall maintain, as part of the facility operating log, documentation of past operating and waste handling practices. This shall include identification of preservative formulations used in the past, a description of drillage management practices, and a description of treated wood storage and handling practices.

NOTE: Authority cited: Sections 25150, 25159, 25159.5 and 25245, Health and Safety Code; and Section 58012, Governor's Reorganization Plan Number 1 of 1991. Reference: Sections 25150, 25159 and 25159.5, Health and Safety Code; and 40 CFR Section 264.573.

#### HISTORY

1. New section filed 7-29-94; operative 8-29-94 (Register 94, No. 30).

2. Change without regulatory effect amending subsection (i) filed 12-28-95 pursuant to section 100, title 1, California Code of Regulations (Register 95, No. 52).

#### **§66264.574. Inspections.**

(a) During preconstruction, construction, and operating phases, liners and cover systems (e.g., membranes, sheets, or coatings) shall be inspected for uniformity, damage, and imperfections (e.g., holes, cracks, thin spots, or foreign materials). Immediately after construction or installation, liners shall be inspected and certified as meeting the requirements of section 66264.573 by an independent, qualified professional engineer registered in California. The certification shall be maintained at the facility as part of the facility operating record. After installation, liners and covers shall be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters.

(b) While a drip pad is in operation, it shall be inspected weekly and after storms to detect evidence of any of the following:

(1) deterioration, malfunctions or improper operation of run-on and run-off control systems;

(2) the presence of leakage in and proper functioning of leak detection system; or

(3) deterioration or cracking of the drip pad surface.

NOTE: Authority cited: Sections 25150, 25159, 25159.5 and 25245, Health and Safety Code; and Section 58012,

Governor's Reorganization Plan Number 1 of 1991. Reference: Sections 25150 and 25245, Health and Safety Code; and 40 CFR Section 264.574.

#### HISTORY

1. New section filed 7-29-94; operative 8-29-94 (Register 94, No. 30).

#### **§66264.575. Closure.**

(a) At closure, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components (pad, liners, etc.), contaminated subsoils, and structures and equipment contaminated with waste and leakage, and manage them as hazardous waste.

(b) If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in subsection (a) of this section, the owner or operator finds that not all contaminated subsoils can be practically removed or decontaminated, the owner or operator shall close the facility and perform post-closure care in accordance with closure and post-closure care requirements that apply to landfills (section 66264.310). For permitted units, the requirement to have a permit continues throughout the post-closure period. In addition, for the purposes of closure, post-closure, and financial responsibility, such a drip pad is then considered to be a landfill, and the owner or operator shall meet all of the requirements for landfills specified in articles 7 and 8 of this chapter.

(c)(1) The owner or operator of an existing drip pad, as defined in section 66264.570, that does not comply with the liner requirements of section 66264.573(b)(1) shall:

(A) include in the closure plan for the drip pad under section 66264.112 both a plan for complying with subsection (a) of this section and a contingent plan for complying with subsection (b) of this section in case not all contaminated subsoils can be practicably removed at closure; and

(B) prepare a contingent post-closure plan under section 66264.118 for complying with subsection (b) of this section in case not all contaminated subsoils can be practicably removed at closure;

(2) the cost estimates calculated under sections 66264.112 and 66264.144 for closure and post-closure care of a drip pad subject to this chapter shall include the cost of complying with the contingent closure plan and the contingent post-closure plan, but are not required to include the cost of expected closure under subsection (a) of this section.

NOTE: Authority cited: Sections 25150, 25159, 25159.5 and 25245, Health and Safety Code; and Section 58012, Governor's Reorganization Plan Number 1 of 1991. Reference: Sections 25150, 25159 and 25159.5, Health and Safety Code; and 40 CFR Section 264.575.
